

**CONDENSATE AND STEAM
FUELED WATER HEATERS**

THE ELIMINATOR

*Designed by Hamilton Engineering,
manufactured in Michigan*

Hamilton Engineering combines their proven water heating technology with your wasted condensate and excess steam energy to provide all of the hot water your laundry needs! "The Eliminator" can provide substantial quantities of hot water, just from the wasted energy in your condensate. If larger quantities of hot water are required, a tank with a second heating coil is available to heat water using your excess steam capacity.

THE ELIMINATOR

CONDENSATE AND STEAM FUELED WATER HEATERS

By eliminating your gas fired water heater, **you eliminate:**

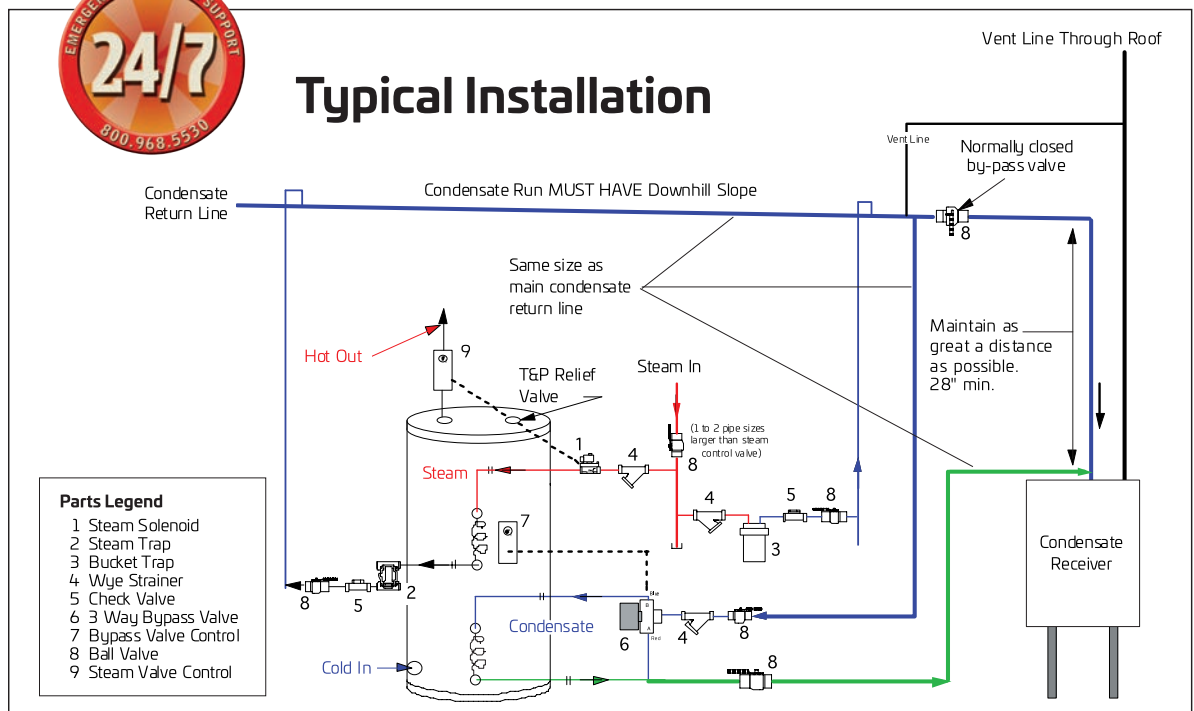

- Additional installation costs of:
 - Gas Line
 - Exhaust Venting
- Heater maintenance
- Heater operation
- The need for additional combustion air openings for proper operation
- Troublesome vent dampers
- Frequent replacement costs

Construction Features:

- 316T Stainless Steel storage tank
- Available in 80 or 120 gallon sizes
- 316T Stainless heating coil (single or dual)
- 2 inches of closed cell foam insulation, surrounding the entire tank—top, bottom and sides
- Heavy gauge, high density, polyethylene outer jacket; won't rust, dent or tear
- All brass condensate and steam controls
- 5 year tank and coil warranty

Typical Installation
